enriched GO terms

Bar chart showing $-\log_{10}(p\_value)$ for enriched GO terms:

- structural constituent of ribosome
- structural molecule activity
- RNA binding
- transferase activity, transferring glycosyl groups
- rRNA binding
- ligase activity, forming carbon−nitrogen bonds
- 4 iron, 4 sulfur cluster binding
- hydrolase activity, acting on carbon−nitrogen (but not peptide) bonds
- kinase activity
- iron−sulfur cluster binding

x-axis: $-\log_{10}(p\_value)$ (0.0, 0.5, 1.0, 1.5, 2.0)

y-axis: GO terms
